1 ILAHI — Complete Master Build Prompt (Ground-Up)

1.0.1 SIH 2026

1.1 Read This First

Assume **nothing** in this codebase exists yet. This is a complete, ground-up build order — do not skip steps or assume earlier phases from a prior session are done. Build in the exact step order below; each step ends with a "test before moving on" check. Do not start Step *N+1* until Step *N*'s check passes.

This is a hackathon **prototype**, not a production system — working and demoable beats architecturally perfect. But apply the security and RLS basics listed at every step; don't defer them to "later."

Out of scope for this build: real payment gateway integration, real identity/KYC verification, any state other than Gujarat and Rajasthan.

1.2 STEP 1 — Environment, Stack & the Non-Negotiable Design Directive

1.2.1 1.1 Stack

- React 19, Vite, TypeScript, Tailwind v4, shadcn/ui
- Supabase (Postgres + Auth + Storage + Realtime)
- No router — single-page state machine in `App.tsx`
- Backend logic (matching score, escrow transitions) can live client-side or as Supabase Edge Functions — Edge Functions preferred for anything that shouldn't be trusted to the client (scoring inputs, escrow status writes)

1.2.2 1.2 What ILAHI is (keep this front-of-mind for every screen you build)

ILAHI connects travelers with verified local guides/hosts across **Gujarat and Rajasthan**. A tourist sets a destination, dates, budget, and interests; ILAHI's matching system surfaces a compatible verified local, generates a suggested itinerary around real local knowledge, handles in-app booking, and keeps the traveler safe with visible trust/safety features throughout. It is not a hotel-booking clone, not a generic guide marketplace, and not a social app — the combination of **discovery + human connection + booking + safety** in one flow is the point.

1.2.3 1.3 Non-Negotiable Design & Content Directive

Apply this from the very first component you write — do not build generic first and "de-slop" later. Every screen must be checked against this before you consider it done.

Visual — banned vs. required:

Category	Don't	Do
Color	Purple/indigo-to-blue gradients, generic "trustworthy SaaS blue"	A palette earned from Gujarat/Rajasthan geography and craft — terracotta, Bandhani indigo, Rann-of-Kutch white, saffron, Jaisalmer sandstone gold, mirror-work accents. Pick which hue leads per state/screen with a reason, not decoration.
Typography	Inter/Roboto everywhere, or a cliché Poppins+OpenSans pairing with no rationale	One expressive display face tied to the heritage/travel theme for headings, one clean workhorse face for body. Real weight hierarchy (display/heading/body/caption).

Category	Don't	Do
Layout	Three identical feature cards in a row repeated section after section; centered hero + centered single CTA	Asymmetric cards, bento-style grouping, editorial alignment. Must read as an app (cards, sheets, tabs, bottom nav) — not a scrolling marketing page, even on desktop.
Depth	Heavy drop shadows on flat cards; glassmorphism blur on every panel	Flat cards, minimal/no shadow; at most one glass element per screen if any
Icons	Generic line-icon-in-a-pastel-circle repeated on every card	One consistent custom-feeling icon system, consistent stroke weight, tied to travel/culture where relevant
Motion	One uniform fade-in-on-scroll applied to everything	Vary by content type — cards stagger, stats count up, list items cascade, hero parallaxes subtly
Explicitly banned decorative defaults	Radial glow orbs, dot-grid backgrounds, liquid-glass panels, animated gradient blobs, rainbow accent coloring, decorative terminal-window elements, emoji as section headings	None of these belong on this app — don't introduce them at any step below

Copy — banned vs. required:

Don't	Do
Generic SaaS headlines ("Empower your journey", "Reimagine travel")	Specific copy naming the real place — "Rogan painting in Nirona," not "authentic local crafts"
Heavy em-dash cadence, the "It's not X, it's Y" rhetorical crutch	Plain, direct sentences
Decorative sparkle icons or "NEW" badges with nothing behind them	Omit, or reserve for an actual new feature
Fabricated testimonials/review quotes	Real rows from the `reviews` table only, or a clearly labeled empty state
A mock escrow/UPI screen that's purely visual	Every status shown must reflect a real `bookings.status` write (Step 8)
Generic 3-tier pricing UI	Not applicable to ILAHI's booking model — never introduce it
Missing legal pages	Add a minimal static Privacy Policy + Terms page — ILAHI collects phone numbers and ID uploads, omitting these reads as unfinished to judges

Test before moving on: you can state, in one sentence per screen, *why* each color/layout choice was made. If the answer is "it's the default," fix it now, not later.

1.3 STEP 2 — Database Schema & RLS (Supabase)

Create every table below with `uuid` or `text` primary keys as specified, `timestamptz` for dates, and `auth.users(id)` references for identity. **Every column must stay nullable except where marked required**, so any row can later be inserted or hand-edited directly from the Supabase Table Editor without the app breaking on missing data — handle `null` gracefully everywhere (empty array → "Not added yet", not an error).

```
-- ============ GUIDES ============
create table guide_profiles (
  id uuid primary key default gen_random_uuid(),
  user_id uuid references auth.users(id) on delete cascade,
```

```
  full_name text not null,
  phone text not null,
  photo_url text,
  state text not null check (state in ('Gujarat','Rajasthan')),   -- Tier 1, required
  primary_area text not null,          -- Tier 1, required: a district (validate against destinations.d
  areas_of_expertise text[],           -- Tier 2: multiple districts/localities
  specialties text[],                  -- Tier 2: tag-picker, e.g. 'heritage walks','craft workshops'
  languages text[],                    -- Tier 2: spoken languages - feeds matching
  travel_style_tags text[],            -- Tier 2: e.g. 'slow travel','adventure','family-friendly'
  safety_tags text[],                  -- Tier 2: e.g. 'solo-female-friendly','family-friendly'
  bio text,                            -- Tier 2
  availability_preset text default 'flexible', -- 'weekday_mornings' | 'weekends' | 'flexible' | 'custo
  is_verified boolean default false,   -- admin-controlled, manual approval
  verification_notes text,             -- admin-only
  credential_url text,                 -- private storage path, never public
  contact_visible boolean default false, -- flips true once a confirmed booking exists
  rating_avg numeric,                  -- derived from reviews; null = neutral score, never faked
  profile_completion_pct int generated always as (
    (case when bio is not null then 1 else 0 end +
     case when specialties is not null and array_length(specialties,1) > 0 then 1 else 0 end +
     case when areas_of_expertise is not null and array_length(areas_of_expertise,1) > 0 then 1 else 0
     case when languages is not null and array_length(languages,1) > 0 then 1 else 0 end +
     case when credential_url is not null then 1 else 0 end) * 20
  ) stored,
  created_at timestamptz default now(),
  updated_at timestamptz default now()
);

create table guide_availability (
  id uuid primary key default gen_random_uuid(),
  guide_id uuid references guide_profiles(id) on delete cascade,
  day_of_week int,   -- 0=Sunday..6=Saturday, nullable if using preset only
  start_time time,
  end_time time,
  is_active boolean default true
);

-- ============ DESTINATION CONTENT (Gujarat + Rajasthan) ============
create table destinations (
  id text primary key,                 -- e.g. 'GJ01', 'RJ01' - matches the seed data
  state text not null check (state in ('Gujarat','Rajasthan')),
  district text not null,
  place_name text not null,
  categories text[] not null,
  is_hidden_gem boolean default false,
  tags text[] not null,
  summary text not null,
  budget_band text check (budget_band in ('low','medium','high')),
  suggested_duration text,
  best_time text
);

create table hidden_gem_spots (
  id text primary key,                 -- e.g. 'HG001'
  parent_destination_id text references destinations(id) on delete cascade,
  state text,
  district text,
  spot_name text not null,
  categories text[],
  tags text[],
  summary text,
```

```
  budget_band text,
  suggested_duration text,
  best_time text,
  linked_main_place_name text
);

-- ============ BOOKING & TRUST ============
create table bookings (
  id uuid primary key default gen_random_uuid(),
  tourist_id uuid references auth.users(id) on delete cascade,
  guide_id uuid references guide_profiles(id) on delete cascade,
  destination_id text references destinations(id),
  state text,
  start_date date not null,
  end_date date not null,
  computed_amount numeric not null,    -- = budget input × trip days, never hardcoded
  status text default 'held' check (status in ('held','released')),
  created_at timestamptz default now()
);

create table reviews (
  id uuid primary key default gen_random_uuid(),
  booking_id uuid references bookings(id) on delete cascade,
  rating int check (rating between 1 and 5),
  comment text,
  created_at timestamptz default now()
);
```

1.3.1 RLS policies

- **Enable RLS on every table above.**
- `guide_profiles` / `guide_availability`: a guide can `select`/`update` only their own row(s) (`user_id = auth.uid()`, or `guide_id in (select id from guide_profiles where user_id = auth.uid())` for availability).
- Public/tourist read access to guides is through a **view**, not the raw table — expose only: `full_name, photo_url, state, primary_area, areas_of_expertise, specialties, languages, travel_style_tags, safety_tags, bio, availability_preset, is_verified, rating_avg, profile_completion_pct`. **Never** expose `phone`, `credential_url`, `verification_notes` through this view.
- `phone` becomes readable to a matched tourist only when a `bookings` row exists for them with `status = 'released'` (or your chosen confirmed state) — implement as a second view or a Postgres function, not a blanket policy.
- `destinations` and `hidden_gem_spots` are public reference content: enable RLS, add a permissive "anyone can select" policy, and do **not** allow client-side insert/update/delete — this data is only edited via the Table Editor or service role.
- `bookings`: `tourist_id = auth.uid()` can select/insert their own rows; a guide can select bookings where `guide_id` belongs to them; status transitions (`held → released`) are the only allowed update.
- `reviews`: insertable only by the tourist who owns the linked booking; readable publicly (rating + comment only) to feed `rating_avg`.
- Admin (you) edits `is_verified`, `verification_notes`, and anything else directly via the Table Editor using the service role — no in-app admin panel needed at this stage.

Test before moving on: in a non-owner session, confirm you cannot `select` another guide's `phone`/`credential_url`, and cannot write to `destinations`.

1.4 STEP 3 — Import Seed Destination Data (Gujarat + Rajasthan)

You have **real** research data for this — 75 destinations (35 Gujarat, 40 Rajasthan) across 17 + 24 districts, plus 41 linked hidden-gem spots. Do **not** invent additional cities/places beyond this dataset at this stage.

Import it one of two ways: 1. Run `destinations_seed.sql` directly in the Supabase SQL editor (inserts both tables in one go), **or** 2. Import `destinations.csv` and `hidden_gem_spots.csv` via the Table Editor's CSV

import, splitting the `categories/tags` columns (semicolon-delimited in the CSV) into `text[]` on import.

Category legend present in the data (use these as your Explore-page filter chips — don't invent new ones): `Adventure, Archaeology, Architecture, Art, Beach, Birding, Craft, Culture, Festival, Food, Geology, Heritage, Hidden Gem, Nature, Pilgrimage, Religious Site, Rural, Science, Wildlife`. `budget_band` is one of `low / medium / high`.

A `hidden_gem_spots` row is a more specific, granular location *within or near* its `parent_destination_id` (e.g. destination `GJ03` "Dholavira" has a linked spot "Khadir Bet Fossil Park") — surface these as an expandable "Nearby hidden gems" section on a destination's detail screen, not as separate top-level destinations.

Test before moving on: `select count(*) from destinations` returns 75; `select count(*) from hidden_gem_spots` returns 41; a query filtered to `state = 'Rajasthan' and 'Heritage' = any(categories)` returns real rows.

1.5 STEP 4 — Guide-Side: Tier 1 Registration (fast, ~2 minutes)

Single-column, mobile-first form: - Full name (text, required) - Phone number (text, validated format, required) - **State** — Gujarat or Rajasthan (required) - **Primary area** — dropdown populated from `distinct district` in `destinations` for the selected state (required) - One photo upload → Supabase Storage `guide-photos` bucket (public-read)

On submit: insert into `guide_profiles` with `is_verified = false`. Redirect to "You're live — complete your profile anytime" with a completion-percentage bar driven by `profile_completion_pct`.

Test before moving on: a guide can go from empty form to a live row in under 2 minutes, and the row appears correctly in the Table Editor with every optional column `null`.

1.6 STEP 5 — Guide-Side: Tier 2 Profile Completion + Dashboard

Trigger this screen when the guide revisits their profile, or when a match request comes in for an incomplete profile.

- **Specialties**: tag-picker (chips), not free text — fixed predefined list (heritage walks, craft workshops, food trails, wildlife, pilgrimage circuits, desert experiences, village stays, etc.)
- **Areas of expertise**: multi-select from `distinct district` in `destinations` for the guide's state — not free text
- **Languages**: multi-select chip picker (Gujarati, Rajasthani/Marwari, Hindi, English, plus others as needed)
- **Travel style tags** and **safety tags**: chip pickers, short fixed lists
- **Availability**: three large preset buttons — Weekday mornings / Weekends / Flexible — plus "Customize" revealing the `guide_availability` day/time fields only if tapped
- **Bio**: short optional text area
- **Credentials**: async upload to a **private** Storage bucket (`guide-credentials`) — never blocks Tier 1, shows "Pending review" until an admin flips `is_verified`
- Live "Profile X% complete" bar

Build a simple **Dashboard** screen for the guide: their live profile preview, completion bar, incoming match/booking requests (Step 8), and their `rating_avg` once reviews exist.

Test before moving on: every Tier 2 field can be filled independently and in any order without breaking Tier 1's live row; skipping Tier 2 entirely still leaves a fully functional, bookable guide.

1.7 STEP 6 — Tourist-Side: Destination Explore

Build `ExplorePage` to query `destinations` (and `hidden_gem_spots`) for real — never hardcode a mock list.

- Top-level browse: choose **state** (Gujarat / Rajasthan) → **district** → filter by category chips and budget band
- Each destination card: place name, one-line summary, category tags, hidden-gem badge if `is_hidden_gem = true`, best time to visit

- Destination detail: full summary, linked `hidden_gem_spots` as an expandable "Nearby hidden gems" section, and a "Find a local guide here" CTA that hands the destination + district into `MatchPage` (Step 7)

Test before moving on: switching the state selector actually changes the district list and results — Gujarat and Rajasthan must feel like two fully populated halves of the app, not one real state and one stub.

1.8 STEP 7 — Tourist-Side: AI Matching

`MatchPage` collects: destination (state + district, pre-filled from Explore if the tourist came from there), trip dates, budget, interests (from the category legend), preferred language, travel style, and safety preference.

Query the **public guide view** (Step 2), hard-filtered first, then scored:

Hard filter (before scoring): - Guide's `state` matches the tourist's chosen state - Guide's `primary_area` or `areas_of_expertise` includes the chosen district (or is in the same state if no exact district match exists) - Safety preference, if set, must be present in the guide's `safety_tags`

Weighted scoring (7 parameters):

Factor	Weight	Source
Interest coverage	0.30	overlap between tourist's chosen categories and guide's `specialties/tags`
Rating / trust	0.15	guide's `rating_avg` (from real `reviews`); if no reviews exist yet, default to a neutral mid-score — never fake a number
Language match	0.15	overlap with guide's `languages`
Availability fit	0.10	join against `guide_availability` / `availability_preset` against trip dates
Travel style	0.10	overlap with guide's `travel_style_tags`
Budget fit	0.10	tourist's budget vs. the `budget_band` mix of destinations the guide covers
Safety preference	0.10	already hard-filtered above; score based on how many safety tags overlap beyond the minimum

Show the top match(es) with a visible **per-factor score breakdown** ("why this % match") — never just the final number. Implement the scoring function client-side or as a Supabase Edge Function.

Test before moving on: changing the tourist's interests or destination actually changes which guide ranks first, and the percentage shown is computed, not hardcoded.

1.9 STEP 8 — Booking + Mock UPI / Escrow Flow

- Compute `computed_amount` for real: budget input × trip days from `MatchPage` — never hardcode an amount.
- On booking confirmation, insert a row into `bookings` with `status = 'held'`.
- Mock UPI payment step: UPI ID entry or QR display, confirmation step — visually convincing, clearly non-functional as a real payment path, no real payment gateway integration.
- Escrow status: a real status write, **Held → Released**, shown as a clear visual timeline, replacing any `setTimeout`-based simulation.
- After a trip, let the tourist submit a rating (1–5) + comment into `reviews`, linked to the `booking_id` — this feeds `rating_avg` back into Step 7's scoring, with real data.

- Once a booking exists with your chosen "confirmed" status, flip `contact_visible`/expose `phone` per the Step 2 policy.

Test before moving on: refresh the page mid-flow — the booking and its status persist from the database, not from component state.

1.10 STEP 9 — Safety & Trust Pillar

This is a core differentiator — keep it visible on the main flow, not buried in a settings menu.

- **Verification badge**: shown wherever a guide's `is_verified = true` appears (Explore results, Match results, guide profile)
- **Trust/rating score**: `rating_avg` shown on guide cards once real reviews exist; neutral/"New guide" state when it doesn't
- **SOS workflow**: a persistent, reachable SOS action during an active trip (mocked — logs an event, shows a confirmation state, no real emergency dispatch)
- **Live trip-sharing (mocked)**: a simple "sharing with [trusted contact]" indicator during an active booking, using Supabase Realtime if you want it to feel live — no real GPS integration required for the prototype
- **Community/reporting signal**: a simple "report" affordance on a guide profile, even if it just writes to a table for now

Test before moving on: a judge looking only at the tourist-facing screens can find verification, trust score, and SOS without digging.

1.11 STEP 10 — App Shell: Branding, Theme, Navigation, Motion

- **Dark/light toggle**: persistent in the top app bar; respect `prefers-color-scheme` on first load, then remember explicit choice; full palette redefinition per Step 1's directive, not a simple inversion
- **"ILAHI" wordmark/logo**: visible on every screen, intentional custom typography, always clickable back to Home (Step 12 QA item)
- **Navigation**: bottom nav bar — Home / Explore / Bookings / Profile — over a website-style top nav; card- and tab-based navigation throughout
- **Motion**: scroll-triggered reveals varied by content type, micro-interactions on tap/click, background Gujarat/Rajasthan tourism imagery as section backdrops with a contrast overlay so text stays legible — per Step 1's motion rules, no single uniform fade applied everywhere
- Compact, app-like layout on both mobile and desktop — a centered app-frame container, not a full-width scrolling marketing site

Test before moving on: toggling theme mid-session doesn't lose scroll position or form state; the app reads as a native app shell on desktop, not a shrunk website.

1.12 STEP 11 — Security & Secrets Hygiene Checklist

- ☐ RLS enabled and tested on every table, from a non-owner session
- ☐ `credential_url` and `phone` never returned by any anon-key query
- ☐ Storage: `guide-photos` public-read only where intended; `guide-credentials` strictly private
- ☐ Phone number format validated client- **and** server-side
- ☐ Upload restrictions enforced: photos jpg/png only; credentials pdf/jpg only; both size-capped
- ☐ No hardcoded Supabase keys anywhere in source — use the existing env connection only
- ☐ `.env` excluded via `.gitignore`; a `.env.example` with placeholder values only exists before any commit
- ☐ Rate-limit or debounce registration/booking submissions to avoid spam rows
- ☐ Basic input validation on every form, not just the guide registration one

---

1.13 STEP 12 — Site-Health / Functional QA Pass

Run this across **every** screen and state, not just the landing screen.

- ☐ No horizontal scroll at any breakpoint
- ☐ Mobile menu present, functional, closes on selection
- ☐ All internal links/state transitions resolve — no dead ends
- ☐ Footer links functional
- ☐ Custom 404 / not-found state for unreachable app states
- ☐ No nav items that lead nowhere yet
- ☐ "ILAHI" logo clickable from every screen → returns Home
- ☐ Every phone number is a working `tel:` link
- ☐ Every email address is a working `mailto:` link
- ☐ Success confirmation after every state-changing action (booking, profile save, escrow release, review submit)
- ☐ Specific error messages on validation/network failure — never a generic "Something went wrong"
- ☐ No leftover Lorem ipsum / `TODO` / placeholder text
- ☐ Favicon set; accurate `<title>` per screen; meta description present
- ☐ Copyright year computed via `new Date().getFullYear()`, never hardcoded
- ☐ Images compressed/optimized
- ☐ Skeleton loaders only where a fetch genuinely takes >300ms
- ☐ Every screen checked at 375px width — not just Home/Explore
- ☐ Tap targets 44px; forms usable one-handed

1.14 STEP 13 — Final Self-Check: Definition of Done

- ☐ Every table from Step 2 exists with RLS enabled and tested
- ☐ All 75 destinations + 41 hidden-gem spots imported and queryable by state/district/category
- ☐ Guide Tier 1 signup takes under 2 minutes and produces a live, bookable row
- ☐ Tier 2 fields are all independently optional and human-editable from the Table Editor
- ☐ ExplorePage and MatchPage both query real Supabase data for both Gujarat and Rajasthan — no mock arrays anywhere
- ☐ Match scoring shows a real per-factor breakdown that changes with input
- ☐ Booking amount is computed, not hardcoded; escrow status is a real DB write, not a `setTimeout`
- ☐ Reviews feed real `rating_avg` back into matching
- ☐ Verification badge, trust score, and SOS are visible on the main tourist flow
- ☐ Dark/light mode fully redefines the palette and persists choice
- ☐ Every item in Step 1's visual/copy ban table is absent from every screen — check this last, after everything else works
- ☐ Every Step 11 and Step 12 checkbox passes
- ☐ `.env` is gitignored and no secret is hardcoded anywhere

2 Appendix A — Destinations Dataset (destinations.csv)

This appendix reproduces the full destination reference dataset for Gujarat and Rajasthan, as supplied in `destinations.csv`.

Table 4: ILAHI Destinations — Gujarat & Rajasthan (75 rows)

ID	State	District	Place	Categories	Tags	Summary	Budget	Duration	Best Time
GJ01	Gujarat	Patan	Rani ki Vav	Heritage	Architecture, History, Photography	UNESCO-listed stepwell and Solanki-era heritage	medium	half_day	October-March
GJ02	Gujarat	Mehsana	Modhera Sun Temple	Heritage	Architecture, History, Culture, Photography	Historic temple complex and dance/cultural heritage	medium	half_day	October-March
GJ03	Gujarat	Kutch	Dholavira	Heritage	Archaeology, History, Photography, Slow travel	Harappan archaeological site in the Great Rann landscape	medium	full_day	October-March
GJ04	Gujarat	Panchmahal	Champaner-Pavagadh	Heritage, Pilgrimage	History, Architecture, Pilgrimage, Nature	Fortified historic landscape with temples and Indo-Islamic monuments	medium	full_day	October-March
GJ05	Gujarat	Ahmedabad	Old Ahmedabad Heritage Walk	Heritage, Food, Culture	Architecture, Food, History, Walking, Photography	Pols, historic streets, markets and local food culture	low	half_day	October-March
GJ06	Gujarat	Gandhinagar	Adalaj Stepwell	Heritage	Architecture, History, Photography	Ornate historic stepwell near Ahmedabad-Gandhinagar	low	2-3_hours	October-March
GJ07	Gujarat	Kutch	Nirona Craft Village	Hidden Gem, Craft	Crafts, Culture, Art, Shopping, Slow travel	Rogan painting and village craft traditions	medium	half_day	October-March
GJ08	Gujarat	Kutch	Ajrakhpur	Hidden Gem, Craft	Textiles, Art, Culture, Workshop, Shopping	Ajrakh block-printing tradition and artisan experience	medium	half_day	October-March
GJ09	Gujarat	Kutch	Bhujodi	Craft, Culture	Weaving, Textiles, Shopping, Culture	Handloom and weaving traditions around Bhuj	medium	half_day	October-March
GJ10	Gujarat	Kutch	Hodka Village	Hidden Gem, Rural	Village life, Crafts, Culture, Slow travel, Photography	Traditional Kutch village and craft-oriented rural experience	medium	half_day	October-March
GJ11	Gujarat	Kutch	Lakhpat	Hidden Gem, Heritage	History, Architecture, Photography, Slow travel	Historic fortified settlement near the Kutch coast	low	half_day	October-March

Table 4: ILAHI Destinations — Gujarat & Rajasthan (75 rows) (continued)

ID	State	District	Place	Categories	Tags	Summary	Budget	Duration	Best Time
GJ12	Gujarat	Patan	Patola Weaving Experience	Craft, Culture	Textiles, Art, Heritage, Shopping, Workshop	Double-ikat Patola weaving tradition	high	half_day	year_round
GJ13	Gujarat	Chhota Udepur	Tribal Culture & Craft Experience	Culture, Craft, Rural	Tribal culture, Crafts, Art, Village life	Tribal heritage, museums and indigenous crafts	medium	full_day	October-March
GJ14	Gujarat	Sabarkantha	Polo Forest	Nature, Heritage	Nature, Trekking, History, Photography, Slow travel	Forest landscape with historic ruins and temples	low	full_day	October-March
GJ15	Gujarat	Narmada	Zarwani Waterfall	Nature	Waterfall, Trekking, Photography, Adventure	Forest and waterfall experience in the Narmada region	low	full_day	July-February
GJ16	Gujarat	Kutch	Great Rann of Kutch	Nature, Culture	Desert, Photography, Culture, Wildlife, Slow travel	Salt desert landscape with Kutch culture and crafts nearby	medium	full_day	November-February
GJ17	Gujarat	Kutch	Rann Utsav	Festival, Culture	Music, Dance, Crafts, Food, Culture, Photography	Seasonal celebration of Kutch art, crafts, music and culture	high	1-2_days	November-February
GJ18	Gujarat	Gir Somnath	Somnath Temple	Pilgrimage, Heritage	Pilgrimage, Architecture, History, Spirituality	Major Shiva pilgrimage destination on the Arabian Sea coast	low	half_day	October-March
GJ19	Gujarat	Devbhumi Dwarka	Dwarkadhish Temple	Pilgrimage, Heritage	Pilgrimage, Spirituality, History, Architecture	Major Krishna pilgrimage destination	medium	half_day	October-March
GJ20	Gujarat	Bhavnagar	Palitana / Shatrunjaya	Pilgrimage, Heritage	Jainism, Pilgrimage, Architecture, Trekking	Jain pilgrimage complex on Shatrunjaya hill	medium	full_day	October-March
GJ21	Gujarat	Banaskantha	Ambaji Temple	Pilgrimage	Pilgrimage, Spirituality, Culture, Festival	Major Shakti pilgrimage destination	low	half_day	October-March
